

Maintaining Porcelain

- Unpolished porcelain tile:
 - Start by mixing a solution of ¼ cup vinegar with 2 gallons of hot water, or use a household cleaner.
 - Vacuum the floor to remove any loose dirt and debris
 - Apply the cleaning solution to the floors surface in small sections
 - Allow to set for a few minutes without allowing the solution to dry
 - After the solution has set, scrub it with a sponge mop or soft bristle brush to remove dirt and stains from the surface
 - Wipe away dirty water, then rinse with clear water. Using a wet vacuum works well to remove all of the cleaning solution.
 - Allow floor to dry before walking on it or replacing furniture.
- Polished porcelain tile (Shower walls):
 - Use hot water to rinse the surface
 - Loosen heavier soil with a soft bristle brush (or an old toothbrush)
 - For stains, use a vinegar and water mixture (or a commercial cleanser diluted to half strength)
 - Rinse with clear water before cleanser dries
 - Dry surface with a clean towel or microfiber cloth
